

TIRE SPREADER 5120

Branick®

Proudly Made
in the U.S.A.

Versatile and easy to use spreader!

The Model 5120 is typically used for both passenger and light truck tires when you need a little more from a spreader. It is air powered, easy on the operator and your bottom line. It comes with a convenient tool tray that can be mounted on either side of the spreader. The stable 4-point base can be bolted to the floor and there's a foot control valve for spreading the tire, which also gives you a stable work surface. There is an easy spring-loaded adjustment and the high-impact industrial light is mounted on a flexible arm making it easier for inspection and repair. It uses a CFL bulb that is RMA compliant, meaning our bulbs emit a minimum of 200 foot candles, which the RMA requires for proper tire repairs. Made in the U.S.A. at Branick's manufacturing facility in Fargo, ND!

*Branick bulbs emit a minimum of 200 foot-candles, which is required for tire repair.
