FREE WAREHOUSE LAYOUT

Over the years, Martins Industries has acquired a wealth of experience in designing warehouse layouts. As a result, our technicians are well acquainted with the best practices in the industry. We can help you in several ways:

- Working with your warehouse space, your tire volume, your equipment and your financial resources, our technicians will guide you in selecting the right racks and handling system for you.
- Using data or existing plans, we identify the most efficient layout for your tire storage, at no charge. Very often, we come up with a plan that allows you to store more tires per square foot, thus avoiding the considerable costs involved in building, expanding or purchasing unnecessary mezzanines.
- Martins Industries can also work with your organization's health and safety agency, your insurers, and other departments to facilitate the integration of changes to your warehouse.

Contact us before choosing a tire warehousing system.

DESIGN AND PROTOTYPING

Martins Industries can design custom tire racks, carts and displays specifically for your company, whether you have a warehouse with special requirements or you are a marketing group looking to create an image. The following are the most common steps involved in the custom design and manufacturing process:

- Meet with your company's representative to talk about the field of application and advices in our area of expertise.
- Produce and present 3-D design drawings.
- Revise the drawings based on your observations and obtain approval.
- Produce one to four prototype units and have users test them.
- Make adjustments to design drawings and carry out volume production.

MANUFACTURING TO YOUR SPECIFICATIONS

Martins Industries bids and manufactures based on technical specifications. If you are already using a tire rack, cart or display that we don't have in our standard product line, we can bid on it and manufacture it for less. If you send us a drawing or a photo or the rack itself, we can make an offer and ship it from whichever of our plants is located closest to your facility. We have done so for many different products and many different large companies.

ADJUSTABLE TIRE SHELVING

DESCRIPTION

Whether you use shelving to hold your customers' tires or to store new tires, keeping tires on their tread instead of stacking them flat saves a lot of time. The length and width of the rack are the same in the 3-tier, 4-tier and 5-tier tire shelving. Only the height varies from one model to the next. Each tier holds 9 to 11 passenger or light truck tires, for a maximum of 500 lb. per tier. The sectional beams are angled at 45 degrees to properly hold the tires, making it easier to load and unload. Putting the heavier tires on the bottom tier makes the employees' job easier. The shelves can be adjusted in 1½" increments to suit tire sizes. Floor fasteners, wall brackets and shelving brackets for mounting the tire shelving are included in every box.

TIRE CONVEYORS

DESCRIPTION

Martins Industries' tire conveyors are specially designed to move passenger and light truck tires. The tire conveyor is the perfect tool to move tires up to or down from a mezzanine. The standard conveyors are manufactured in lengths of 15', 18', 21' and 24', which are the most common sizes.

The conveyor features a control panel at both end and a steel anchor plate at the bottom for stability. Installation only takes a few minutes: secure the four anchors to the floor or on the conveyor stand and plug the prewired electrical controls into an electrical outlet of 120 Volts or have connected the 240 Volts depending on the model of conveyor. The cleats on the conveyor belt ensure that tires are held properly. This conveyor prevents the need for dangerous manoeuvres and speeds up tire handling.

CONVEYOR FEATURES

Swivel base

PVC Cleats

Main control box at the bottom of the conveyor

Secondary control box at the top of the conveyor

Tire conveyor motor 1 HP or 2 HP (depending on the conveyor model)

Chain & sprocket guard

PORTABLE INFLATION CAGES

DESCRIPTION

The portable inflation cage is often used by road service vehicles for changing and inflating tires on trucks, buses, military vehicles, etc. This light, compact yet sturdy inflation cage is manufactured in our Canadian plant using steel that meets the toughest standards in North America. The portable inflation cage folds down to a depth of only 7", making it very easy to stow in your service truck. These safety cages, a mandatory precaution for tire inflation, provide good protection and exceed the requirements of OSHA Standard 29 CFR 1910.177 in the U.S. Before using the portable inflation cage, please read the instructions carefully.

AUTOMATIC HD INFLATION CAGES

DESCRIPTION

The heavy duty tire inflation cage is used to inflate tires for trucks, military vehicles, tractors and aircrafts. The MIC-AUHD models are specially equipped with an automatic tire inflator to make the cages even safer. The MIC-AUHD are equipped, on both of its doors, of a security system that activates or deactivates the inflation of tires. If one of the doors is open the automatic tire inflator will not be activated. You must close the 2 doors properly in order to inflate. Martins Industries heavy duty inflation cage is equipped with an air hose and a wire. Just plug them in and inflate!

DESCRIPTION MIC-MINE

The largest inflation safety cage ever built in the world, this monster cage can handle tires with diameters of up to 115" (3 meters). The cage itself weighs more than 9 000 lb. (4 100 kg). Hot dip galvanized, this cage is manufactured to withstand temperatures ranging from -60° to +50° Celsius (-58° to 122° Fahrenheit).

The MIC-MINE is specially equipped with a tire cradle to easily, rapidly and safely handle your tires outside of the cage. You can move either the cage itself or only the cradle to transport your tire. You can also secure your tire directly into the cage if you use a tire manipulator.

This heavy-duty inflation cage is manufactured in our Canadian plant using steel and components that meets and exceeds the toughest standards in the world.

AUTOMATIC TIRE INFLATORS

DESCRIPTION

Reliable and sturdy, the automatic tire inflators are fabricated to meet international standards, to inflate tires of trucks, tractors, military vehicles and planes. With its adjustable air pressure, its automation, its ringtone and its LCD screen, the automatic tire inflator facilitates and secures the inflation of tires. The automatic tire inflators are equipped with an input and output, an exhaust and a memory that retains calibration data. It can measure the air pressure with 3 types of unit of measurement that are PSI, BAR and kPA. The reading accuracy is 0,29 PSI / 0,02 BAR.
